	SECTION 12: Ecological information
Other Information	No data available
Aspiration hazard	No data available
STOT - repeated exposure	Muhle et al. reported pulmonary response upon chronic inhalation exposure in rats to a toner enriched in respirable-sized particles compared to commercial toner. No pulmonary change was found at 1 mg/m <sup>3</sup> which is most relevant to potential human exposure. A minimal to mild degree of fibrosis was noted in 22% of the animals at 4 mg/m <sup>3</sup> , and a mild to moderate degree of fibrosis was observed in 92% of the animals at 16 mg/m <sup>3</sup> . These findings are attributed to "lung overloading", a generic response to excessive amounts of any dust retained in the lung for a prolonged interval.
STOT - single exposure	No data available
Reproductive Toxicity	No data available
Carcinogenicity	No data available
Germ cell mutagenicity	Ames Test (S. typhimurium, E. coli): Negative

#### Mobility in soil

No data available

#### Other adverse effects

No data available

# **SECTION 13: Disposal considerations**

#### Waste treatment methods

DO NOT put toner or a toner container into fire. Heated toner may cause severe burns. DO NOT dispose of a toner container in a plastic crusher. Use a facility with dust explosion prevention measures. Finely dispersed particles form explosive mixtures with air. Dispose of in accordance with local regulations.
