SECTION 11: Toxicological information

Information on toxicological effects

Acute toxicity  LD50 > 2000 mg/kg (Ingestion)
Skin corrosion/irritation  Non-irritant
Serious eye damage/eye irritation  Transient slight conjunctival irritation only.
Sensitization  Non-sensitizing
Germ cell mutagenicity  Ames Test (S. typhimurium, E. coli): Negative
Carcinogenicity  No data available
Reproductive toxicity  No data available
STOT - single exposure  
No data available

STOT - repeated exposure  
Muhle et al. reported pulmonary response upon chronic inhalation exposure in rats to a toner enriched in respirable-sized particles compared to commercial toner. No pulmonary change was found at 1 mg/m$^3$ which is most relevant to potential human exposure. A minimal to mild degree of fibrosis was noted in 22% of the animals at 4 mg/m$^3$, and a mild to moderate degree of fibrosis was observed in 92% of the animals at 16 mg/m$^3$. These findings are attributed to "lung overloading", a generic response to excessive amounts of any dust retained in the lung for a prolonged interval.
