Mobile Device and Cloud Service Use Continues to Grow, but Printing Documents with These Technologies Has Been Difficult

No Practical Options to Print Documents from Mobile Devices

Over the years, most business environments have kept pace with connectivity needs for modern office users.

The use of smartphones has exploded—and tablet use is sharply on the rise.

But the widespread use of mobile devices amplifies a major source of frustration for businesses: printing.

There is a high demand for print via mobile devices, but applications are limited in functionality.

Options That Enable Printing from Mobile Devices Seem Difficult

For most modern business environments, broadband connections and wireless Wi-Fi hotspots have become common, state-of-the-art business tools.

The ability to access work documents whenever needed and wherever you are has come to be expected.

But the difficulties associated with printing documents from mobile devices remain a source of frustration.

IT administrators haven't championed mobile print access, fearing it will become a complex implementation, heavy investment, or security risk.

We Must Use a PC to Access, Print, or Scan Documents Using Our Cloud Service

Business users rely on laptops and desktop PCs to access, update, store, and print their documents—including those that are stored in the cloud.

It's not always practical or convenient to have a PC handy, yet we still need to easily access, share, and print these documents.

Collaboration isn't as simple or streamlined as it could be.

Distribution of information from hard-copy documents can be delayed.

Projects take longer to complete.

Boost the Business Value of Your Mobile Devices and Cloud Services by Delivering Simple Ways to Print

If You Can Forward an E-mail, You Can Print from Your Mobile Device

Print documents from your mobile device by using a simple print request workflow.

Send your documents to a universal print address: print@printme.com

1. Select print button through simple, touchscreen interface

2. Enter unique authorization code

3. Select documents to print

4. Choose print settings and print

Documents have been securely accessed and printed from your mobile device.

Send Documents to Print through an Intuitive Mobile Application

Print documents from your mobile device through an easy-to-use mobile app.

1. Authenticate through a simple, touchscreen interface

2. Select documents and settings, then print

Documents from your mobile device have been securely printed.

Our IT administrator appreciates the simple implementation and easy management.

Print from – and Scan to – Cloud Services through a Simple MFP Touchscreen Interface

Cloud Services

Boost productivity and collaboration by scanning your hard-copy documents to cloud services like Google Docs or MS SharePoint Online.

Cloud Services

Access and print documents remotely from cloud services such as Google Docs and MS SharePoint Online directly from the MFP—no PC or laptop is required.

Canon Cloud and Mobile Device Solutions Make It Easier to Print

Enhance the Utility of Cloud Services

The Cloud Portal for Canon imageRUNNER ADVANCE solution is designed for companies already using—or considering using—Microsoft SharePoint Online and Google Docs cloud services. Setup is fast, simple, and requires very little IT involvement. In addition, there is no need to purchase or install additional hardware, servers, drivers, or software. In fact, some of the apps are server-less, driver-less, and can be deployed easily through the MFP display.

This unique solution enables end-users to access their cloud content easily, quickly, and securely right from a Canon imageRUNNER ADVANCE office system. Once enabled, users can log into their Google Docs or Microsoft SharePoint Online accounts right from the control panel of a Canon imageRUNNER ADVANCE device with their User IDs and passwords.

- ✓ No need to change firewall settings
- ✓ No need for printers to connect directly to the Internet
- ✓ No need for printers to directly receive e-mails
- ✓ No need to be on a local Wi-Fi network
- ✓ Must respect existing username/password requirements

Print from the Cloud

EFI™ PrintMe® is a cloud service printing solution that allows users to print on

Internet-enabled Canon imageRUNNER ADVANCE devices without the need to purchase additional software, cables, or servers. Once installed, users can begin to print immediately from their mobile devices.

The solution caters to mobile professionals who need 24/7 access to their documents with the mission-critical need to print their documents on the go. With EFI™ PrintMe®, you can do the following:

- ✓ Submit print jobs via e-mail
- ✓ Submit print jobs via Web browser
- ✓ “File, Print” from any application
- ✓ Retrieve print jobs from compatible imageRUNNER ADVANCE devices via secure login

Access the Cloud to Print and Scan

uniFLOW v5.1 is the only print and scan management system in the market with

completely integrated mobile print capabilities. Your organization can now offer office guests, business partners, and mobile staff the ability to print directly from their mobile devices. All this can be enabled as part of a company’s managed print infrastructure, so you retain full cost control with print and network security. With uniFLOW v5.1, you can do the following:

- ✓ Submit print jobs via e-mail or Web browser
- ✓ “File, Print” from any application
- ✓ Submit print jobs from iOS devices with the option to apply finishing settings from both smartphones and tablets
- ✓ Release print jobs securely using a smartphone or tablet
- ✓ Submit print jobs securely via corporate Wi-Fi hotspots or 3G/4G connections
- ✓ Enable office guests to print—while you maintain device security—through the use of unique Job Codes
- ✓ Retain full IT control over which smartphones or tablets are permitted to print
- ✓ Access comprehensive reports that detail print jobs that have been submitted via smartphones or tablets
