Please read this instruction manual carefully before operation. Store this manual in a readily accessible location for future reference.

Veuillez lire attentivement ce mode d'emploi avant d'utiliser l'appareil. Conservez-le soigneusement pour référence.
Thank you for purchasing the Canon Video Visualizer RE-350. The RE-350 is a user-friendly portable image input device with a built-in video camera and a 12 x zoom lens. It projects images of flat documents, three-dimensional objects, film, etc., onto a video monitor. Here are the main features:

- Quality images can be immediately projected by the auto focus, auto white balance, and auto iris (automatic exposure) functions.
- This device has abundant video inputs and outputs, including VIDEO IN/OUT, S-VIDEO IN/OUT, RGB OUT, and external synchronization input.
- Simply by pressing a button, you can convert from negative to positive, or switch from color to black and white.
- Stereo sound is available.
- This device has a backlight that can easily project film and other transparencies.
- Functions of the RE-350 can be controlled via RS-232C connection.

To use this product correctly, please read this Instruction Manual carefully before operation.

Confirm that the package contains the following items:
1. Canon Video Visualizer RE-350
2. Power cord (6.6 ft/2 m) x 1
3. Unit cover
4. Instruction Manual
5. Warranty Card

IMPORTANT WARNINGS

Following signs are shown on the product.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point, within an equilateral triangle, is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

- This Instruction Manual may not be copied, in whole or part, without prior consent of Canon.
- The content of this manual is subject to change without notice.

IMPORTANT USAGE INSTRUCTIONS

WARNING: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.

WARNING: TO REDUCE THE RISK OF ELECTRIC SHOCK AND TO REDUCE ANNOYING INTERFERENCE, USE THE RECOMMENDED ACCESSORIES ONLY.

FCC NOTICE

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Do not make any changes or modifications to the equipment unless otherwise specified in the manual. If such changes or modifications are made, you could be required to stop operation of the equipment.

This digital apparatus does not exceed the Class B limits for radio noise emissions from a digital apparatus as set out in the interference-causing equipment standard entitled “Digital Apparatus”, ICES-003 of the Bureau of Industry and Science Canada.

The serial number of this product can be found on the back of the unit. No other unit has the same serial number. You should record the number and other vital information here and retain this book as a permanent record of your purchase to aid identification in case of theft.

IMPORTANT SAFETY INSTRUCTIONS

In these safety instructions the word “product” refers to the Canon Video Visualizer RE-350 and all its accessories.

1. Read Instructions—All the safety and operating instructions should be read before the product is operated.

2. Retain Instructions—The safety and operating instructions should be retained for future reference.

3. Heed Warnings—All warnings on the product and in the operating instructions should be adhered to.

4. Follow Instructions—All operating and maintenance instructions should be followed.

5. Cleaning—Unplug this product from the wall outlet before cleaning. Wipe the product with a clean soft cloth. If necessary, put the cloth in diluted neutral detergent and wring it out well, before wiping the product. Finally, clean the product with a clean dry cloth. Do not use benzene, thinner or other volatile liquids or pesticides as they may damage the product’s finish. When using chemically-treated cleaning cloths, observe their precautions accordingly.

6. Accessories—Do not use non Canon approved accessories as they may be hazardous. Always use the specified connection cables and be sure to connect devices correctly.

7. Water and Moisture—Hazard of electric shock—Do not use this product near water or in rainy/moist situations. Do not put a heater near this product.

8. Placing or Moving—Do not place this product on an unstable cart, stand, tripod, bracket or table. The product may fall, causing serious injury to a child or adult and serious damage to the product. A product and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the product and cart combination to overturn.

9. Power Sources—This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply in your home, consult your product dealer or local power company.

10. Grounding—This product is equipped with a 3-pronged grounding plug (the plug has a third grounding pin). The 3-pronged grounding plug will fit into a grounding type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding-type plug.

11. Power-Cord Protection—Power cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them. Pay particular attention to plugs, and the point from which the cords exit the product.

12. Outdoor Antenna Grounding—If an outside antenna is connected to the product, be sure the antenna is grounded so as to provide some protection against voltage surges and built-up static charges. Section 810 of the National Electrical Code, ANSI/NFPA No. 70—1984, provides information with respect to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See figure 1.
13. Lightning—For added protection of this product during a lightning storm, or when it is left unattended and unused for long periods of time, disconnect it from the wall outlet. This will prevent damage to the product due to lightning and power-line surges.

14. Power Lines—An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might be fatal.

15. Overloading—Do not overload wall outlets and extension cords as this can result in a risk of fire or electric shock.

16. Objects and Liquid Entry—Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Be careful not to spill liquid of any kind onto the product.

17. Servicing—Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

18. Damage Requiring Service—Disconnect the product from the wall outlet and refer servicing to qualified service personnel under the following conditions:

   a. When the power-supply cord or plug is damaged.
   
   b. If any liquid has been spilled onto, or objects have fallen into the product.
   
   c. If the product has been exposed to rain or water.
   
   d. If the product does not operate normally even if you follow the operating instructions, adjust only those controls that are covered by the operation instructions. Improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
   
   e. If the product has been dropped or the cabinet has been damaged.
   
   f. When the product exhibits a distinct change in performance. This indicates a need for service.

19. Replacement Parts—When replacement parts are required, be sure the service technician has used replacement parts that are specified by Canon or that have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

20. Safety Check—Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in safe operating order.

1. NOMENCLATURE AND FUNCTIONS

After turning the power OFF, wait at least 5 seconds before turning the power ON again. Turning the power ON too soon may cause a malfunction.

The illumination lamps do not light up immediately after the LIGHTS button is pressed. To protect the lamps, the system preheats for 3 seconds, then turns the lamps on.
See page 16 for system construction.

**Rear Panel**

- **AUDIO OUT terminals (stereo)**
- **VIDEO OUT terminal**
- **S-VIDEO OUT terminal**
- **RGB OUT terminals**
- **External synchronization input terminal** (See page 19)
- **RS-232C terminal**
  - Use this terminal when controlling the RE-350 by a computer (see page 16, 20).
- **AC outlet**
  - Should not exceed 5A. This outlet is not interlocked.
- **Communication speed selector**
  - Set this switch for communication with a computer. (Left: 2400 bps, right: 9600 bps).
- **Electronic shutter speed selector**
  - Set this switch when controlling the RE-350 by a computer.
- **ID number setting switch**
  - Set this switch when controlling the RE-350 by a computer.

**Right Side Panel**

- **MIC IN jack** (see page 17)
- **Microphone volume control knob**
  - Use to adjust external synchronization (see page 19).
- **Hue (sub carrier) selector**
- **Hue fine-adjustment volume**
- **Horizontal phase adjustment volume**

If the screen flickers, change the setting of this selector. Screen flicker is caused mainly by fluorescent lamps and tends to occur in the areas where power frequency is 50 Hz. Factory default is set to 1/60.
- In areas where the power frequency is 50 Hz, set it to 1/100.
- In areas where the power frequency is 60 Hz, set it to 1/60.
RS232C CONTROL button/indicator
Use this button to switch between online and offline to a computer. The indicator flashes when the system is set to online, and stays lit while online.

INPUT SELECT button/indicator
Use this button to select input equipment, when switching between pictures via the camera head and pictures via external input equipment (see page 17). The indicator lights up when external input equipment is selected.

NEGA button/indicator
Use this button for negative/positive conversion (see page 14). The indicator lights up when conversion is made.

WHITE BALANCE button/indicator/knob
Use this button/knob to adjust color tone (see page 14). To adjust manually, use the WHITE BALANCE knob. Turn the knob to the RED side to increase red tone. Turn the knob to the BLUE side to increase blue tone. The AUTO WHITE BALANCE indicator flashes initially, then lights up when adjustment is completed. If adjustment is unsuccessful, the indicator goes off.

FOCUS buttons/indicator
Use this button to compensate focus (see page 13). To compensate automatically, press the AUTO FOCUS button. To compensate manually, press the NEAR button or FAR button. The AUTO FOCUS indicator flashes initially, then lights up when compensation is completed. The indicator goes off if compensation is unsuccessful, or during manual compensation.

EXPOSURE knob
Use this knob to adjust brightness of the image (see page 15). To increase brightness, turn the knob to the “+” side. To decrease brightness, turn the knob to the “-” side.

ZOOM buttons
Press the WIDE button to change the picture to wide angle. Press the TELE button to change the picture to telephoto angle. Keep pressing the WIDE button or TELE button, the functions will initially work slowly, then faster.

LIGHTS button/indicator
Use this button to turn ON the illumination lamps for reflection copies. The indicator flashes during preheating, and stays lit after preheating.

B/W button/indicator
Use this button to project black-and-white documents (see page 15). The indicator lights up when the system is in black-and-white mode.

POWER indicator
Lights up when the power is ON (see page 12).

DETAIL knob
Use this knob to adjust picture quality (see page 15). Turn the knob to the HARD side to emphasize the outline. Turn the knob to the SOFT side for softer outline.

BACK LIGHT button/indicator
Use this button to turn ON the backlight for transparencies (see page 13). The indicator lights up when the backlight is used.

The illumination lamps and the backlight cannot be used at the same time.
**Assembling**

1. **Unfold and raise the pair of illumination lamps.**
   Raise the right-hand illumination lamp first, then the left-hand illumination lamp (1→2).

2. **Press the arm lock release lever, and raise the arm until it stops.**

3. **Direct the camera head towards the document table.**

4. **Remove the lens cap.**
   Keep the lens cap in a safe place.
Storing

1. Put the lens cap to the lens.

2. Direct the camera head sideways until it stops.

3. Hold the arm with your right hand and press the arm lock release lever, then pull the arm down to the document table very carefully.

4. Fold the pair of illumination lamps very carefully.
   - Fold the left-hand illumination lamp first, then the right-hand illumination lamp (1→2).

   - **CAUTION**: Do not touch the fluorescent lamps after the illumination lamps are turned off, as they may still be hot.

**NOTICE**: Be sure to turn the power OFF before storing the unit.

**NOTICE**: Be sure to hold the arm with your right hand, then press the arm lock release lever.

**CAUTION**: Be sure to hold the arm with your right hand, then press the arm lock release lever.

**MEMO**: Put the supplied unit cover on the RE-350 when the unit is not in use. The unit cover has a pocket to store cords.

**CAUTION**: Place the unit horizontally when storing it. If the unit is stored vertically, it may fall down and cause injury or malfunction. When carrying the unit, turn the power OFF, disconnect the cords, fold the arm and the illumination lamps, and pull out the carrying handle.
Connection

To connect the RE-350 to a monitor, use a commercially available BNC video cable. To use a video monitor with the S-VIDEO terminal, use a commercially available S-video cable. Using S-video enhances picture quality. Use the power cord included with the RE-350.

![Connection Diagram]

When using a BNC video cable

Power cord

MEMO
- See page 16 for connecting equipment. For details of operation, refer to the instruction manual of the equipment to be used.
- If your computer has AV compatibility, you can input images to the computer by connecting your computer to the RE-350 with video cables. If your computer is not AV compatible, a video capture board is necessary.

Notice
- To protect the RE-350 as well as other equipment in use, make sure all the equipment (if any) is OFF before connecting cables. Always hold onto the plug section whenever connecting/disconnecting the cables.

Installation Site and Environment

1. Connect the RE-350 to a correct electronic source.
   - Source voltage: 120VAC ± 10%
   - Source frequency: 60 Hz
2. Install the RE-350 in a proper environment.
   - Temperature: 41°F – 95°F (5°C –35°C)
   - Humidity: 85% max (without condensation)
Turn the power ON.
When the power of the RE-350 is turned ON, the POWER indicator on the operation panel lights up.

1. **White balance** will be automatically adjusted when the power is turned ON. The AUTO WHITE BALANCE indicator flashes initially, then lights up when adjustment is completed. If adjustment is unsuccessful, the indicator goes off (see page 14). Focus can also be automatically compensated.

• White balance will be automatically readjusted if the illumination lamps or backlight are turned on.

Turn ON the power source of the other equipment to be used.
Either the power of the RE-350 or other equipment may be turned on first.

Put the document at the center of the document table.
If no image is displayed, check to see that the lens cap has been removed.

3. To appropriately adjust the white balance, turn ON the power of the RE-350 before putting the document on the table.

Press the AUTO FOCUS button to focus.
The AUTO FOCUS indicator flashes initially, then lights up when adjustment is completed. If adjustment is unsuccessful, the indicator goes off (see page 13). After placing the document, press the ZOOM buttons (WIDE button or TELE button) to adjust the image to the desired size. Whenever the image cannot be focused properly, press the AUTO FOCUS button.

When operation is completed, turn the power OFF.
The POWER indicator goes off. The illumination lamps or backlight will go off (if they are on). Also turn OFF the power of other equipment.

After turning the power OFF, wait at least 5 seconds before turning the power ON again. Turning the power ON too soon may cause a malfunction.

The power of the RE-350 should be turned OFF when the unit is not used. Disconnect the power cord if the unit will not be used for extended periods.
Manual Focusing

When trying to focus correctly or focusing on a particular point of three-dimensional objects, you can achieve focusing by pressing the manual focusing buttons. The manual focusing is valid up to approx. 2-\(\frac{3}{16}\) inch (65mm) above the document table.

Press the manual focusing buttons (NEAR and FAR buttons) when focusing the lens manually. During manual focus mode, the AUTO FOCUS indicator turns off.

To return to auto focus mode, press the AUTO FOCUS button.

Undesirable objects for focusing

Although the auto focus function of the RE-350 is very accurate, objects such as those listed below may present some difficulties. If the system cannot focus automatically, the AUTO FOCUS indicator goes off. If this happens, focus the lens manually using the NEAR button or the FAR button.

1. Objects with a low reflection factor (such as a dark cloth, hair, etc.)
2. Intangible objects (such as candle light, smoke, etc.)
3. Objects having a glossy surface (telephone receiver, glassware, etc.)
4. Objects viewed through glass.

Film Projection

Use the backlight to project transparencies, such as OHP films, photographic negative and positive films and 35mm slides.

Press the BACK LIGHT button to project transparencies. The BACK LIGHT indicator lights up and the document table glows. If the illumination lamps have been lighted, they will go off.

Pressing the BACK LIGHT button again, turns the backlight off.

- Project the film to full monitor size by using the zoom button. If light from the backlight appears in the monitor, the picture itself will not appear very sharp.
- If color tone seems unnatural, press the AUTO WHITE BALANCE button.
- If the auto focus function does not operate accurately with film, focus the lens manually.
- The illumination lamps and the backlight cannot be used at the same time.
Readjusting the White Balance

Readjust the white balance after changing the illumination, or when the color tone seems unnatural. Adjustment to a desired color tone can be made manually.

1. To readjust the white balance, complete the following steps:
   ① Put some white paper on the document table.
   ② Project the white paper to full monitor size by pressing the ZOOM buttons (WIDE button or TELE button).
   ③ Press the AUTO WHITE BALANCE button.

2. To adjust to the desired color tones, adjust manually by using the WHITE BALANCE knob. Turning the knob towards the RED side increases the red tones. Turning the knob to the BLUE side increases the blue tones.

- When the AUTO WHITE BALANCE button is pressed, the AUTO WHITE BALANCE indicator flashes, then lights up when adjustment is completed. However, automatic adjustment may not be done, depending on the types of objects or light source. If adjustment is unsuccessful, the indicator goes off. If this happens, readjust according to method 1. mentioned above.
- Do not move the object while the AUTO WHITE BALANCE indicator is flashing otherwise adjustment will not be done correctly.
- Color tone changes are based on the position of the knob when the AUTO WHITE BALANCE button is pressed. For example, to emphasize the red tones, turn the knob towards the BLUE side, press the AUTO WHITE BALANCE button, then turn the knob towards the RED side.

Converting from Negative to Positive

1. Adjust projected image to full monitor size using the WIDE and TELE buttons.

2. Press the NEGA button for conversion.

During the conversion, the NEGA indicator will light. To return to normal mode, press the NEGA button again.

- By pushing the NEGA button, you can convert from black to white or vice versa. Also, if the image is already in color, you can convert from primary colors to complementary colors.
- Negative/positive conversion is only possible with pictures via the camera head.

MEMO

- If color tones seem unnatural, press the AUTO WHITE BALANCE button, or adjust the white balance manually.

MEMO

- When the AUTO WHITE BALANCE button is pressed, the AUTO WHITE BALANCE indicator flashes, then lights up when adjustment is completed. However, automatic adjustment may not be done, depending on the types of objects or light source. If adjustment is unsuccessful, the indicator goes off. If this happens, readjust according to method 1. mentioned above.
- Do not move the object while the AUTO WHITE BALANCE indicator is flashing otherwise adjustment will not be done correctly.
- Color tone changes are based on the position of the knob when the AUTO WHITE BALANCE button is pressed. For example, to emphasize the red tones, turn the knob towards the BLUE side, press the AUTO WHITE BALANCE button, then turn the knob towards the RED side.
Projecting Black-and-White Documents

To project clearer black-and-white documents, press the B/W button. This setting also allows color documents to be displayed in black-and-white. Switching between color and black-and-white modes is possible only when projecting pictures via the camera head. Therefore, color pictures via external input equipment cannot be switched to black-and-white (see page 17). And also, color pictures of a RGB monitor cannot be switched to black-and-white.

To project black-and-white documents, press the B/W button. During black-and-white mode, the B/W indicator will light.

To return to normal mode, press the B/W button again.

Adjusting Brightness and Picture Quality

The brightness of the picture can be controlled by the EXPOSURE knob. When the document is dark, has low contrast, or is small and dim against brighter background, use the EXPOSURE knob to make the image clearer.

To adjust brightness, use the EXPOSURE knob. Turn the knob towards the “+” side to brighten the picture. Turn the knob toward the “-” side to darken the picture.

Use the DETAIL knob to adjust picture quality. Turn the knob toward the HARD side to emphasize the outline of an object. Turn the knob towards the SOFT side for a softer outline.

Character size when projecting a 13” x 10” size document

To fully display on the monitor a 13” x 10” size document with clear characters, refer to the samples shown below for size and thickness. The character samples are in actual scale (equivalent to 20 point photoset letters, and when outputting from the S-VIDEO OUT).

Canon Video Visualizer
Vidéo Visualiseur Canon
The RE-350 has abundant video input and output terminals. The equipment shown below can be connected to these terminals. Use the specified power cord. For other cords, use commercially available cables. For details of operation, refer to the instruction manual of the equipment to be used.

### Output Equipment

- Video monitor
- Computer
- VCR
- RGB monitor

**Outputting to a RGB monitor**

To output to a RGB monitor, connect the RE-350 to a monitor with RGB input terminal using a commercially available RGB cable. If using a RGB monitor without a SYNC terminal, set the SYNC selection switch to ON. The RGB monitor projects pictures via the camera head, regardless of the selection of input equipment.

### Input Equipment

- Computer
- Video camera

### To control by a computer

To control certain functions of the RE-350 by a computer, complete the following steps:

1. Connect the RE-350 to the computer using a RS-232C cable.
2. Set the electronic shutter, communication speed and ID number.
3. Turn ON the power to the equipment.
4. Operate the computer.

For details, please consult Canon U.S.A.
Changing to Pictures via External Input Equipment

By connecting external input equipment, such as a VCR, video camera, etc, to the VIDEO IN or S-VIDEO IN terminals of the RE-350, you can project pictures via this equipment on the monitor. Pictures via the camera head and external input equipment can be changed alternately each time you press the INPUT SELECT button.

To change to pictures via external input equipment, press the INPUT SELECT button. The INPUT SELECT indicator lights up and then:
- Pictures via the equipment connected to the VIDEO IN terminal will be output to the VIDEO OUT terminal.
- Pictures via the equipment connected to the S-VIDEO IN terminal will be output to the S-VIDEO OUT terminal.
- Sound from the equipment connected to the AUDIO IN terminal will be output to the AUDIO OUT terminal.

To change to pictures via the camera head, press the INPUT SELECT button again.

Using a Microphone

If you connect a microphone to the MIC IN terminal of the RE-350 and connect a monitor with speakers, sound can be output. Regardless of the selection of input equipment, sound from the microphone will be output to both R and L AUDIO OUT terminals in monaural mode. For operation details, refer to the instruction manual of the equipment to be used.

Use the microphone volume control knob to adjust the volume.

Sound from the microphone can be recorded together with pictures if outputting to a VCR.

MEMO
- Regardless of the selection of input equipment, the RGB monitor projects pictures via the camera head.
- Negative/Positive conversion and Color/Black-and-White switching will not function with pictures via external input equipment.
- If a microphone is connected, sound from the microphone will also be output to the AUDIO OUT terminal.
Recording by VCR

When you connect a VCR to the output terminal of the RE-350, use a commercially available BNC video cable and RCA pin cable. If you connect a microphone, you can record audio together with pictures via the camera head onto a video tape. For details of operation, refer to the instruction manual for the equipment to be used.

When you use a VCR with an S-video outlet, use S-video cables to connect to the S-video outlet. This will enable you to project a high quality image.

MEMO
Using External Synchronization

The following illustration shows an example of connecting a camera for a video conferencing system to the RE-350. The picture will not flicker when the INPUT SELECT button is pressed to change from video captured by the camera of the RE-350 to that from external input and vice versa.

External synchronization can be used for compositing images from multiple visualizers or video cameras on a single monitor, as well as for color measurements using a computer. For more information, please contact your dealer.

NOTE

If the RE-350 is the terminating equipment in your system using multiple external synchronization input equipment, set this switch to ON.

Switches for adjusting horizontal phase and hue.

Hue selector
Set the selector according to the hue of the reference signal so that the image hue matches the document hue.

<table>

To utilize the computer control features of the RE-350 a program developers kit is available from Canon U.S.A. The developers kit provides a guide for computer software programmers to create customized software to control camera functions.

[For further information] contact: CANON U.S.A., INC. NEW YORK OFFICE
One Canon Plaza, Lake Success, NY 11042, U.S.A.
phone: 516-328-5960
If the RE-350 does not function properly, check the following points before contacting your dealer.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Reference page</th>
</tr>
</thead>
</table>
| No image appears on the monitor | • The lens cap has not been removed.  
• The power of the RE-350 or other equipment has not been turned ON.  
• Connection may be incorrect.  
• The input source is not selected correctly. | 9  
12  
16  
17 |
| The picture cannot be focused correctly | • The document may be too dark or glowing.  
• Strong light may be reflected on the screen.  
• The object has low contrast.  
• Focusing has been set in manual mode. | 13  
13  
13  
13 |
| Pictures appear reddish/bluish | • The white balance has not been adjusted.  
• The color tone of the video monitor is not correct. | 14  
— |
| Pictures are too bright/dark | • Exposure of the RE-350 or monitor has not been adjusted correctly.  
• The object is not illuminated properly. | 15  
— |
| Pictures appear with flicker | • The electronic shutter speed selector has been set incorrectly. | 7 |
| The input source cannot be changed | • The power of the RE-350 or other equipment has not been turned ON.  
• Connection may be incorrect. | 12  
16 |
| Pictures do not change to black and white | • Pictures via external input equipment have been projected. | 17 |
| The illumination lamps do not light up immediately when the LIGHTS button is pressed | • To protect the lamps, the system preheats for 3 seconds, then the lamps light up. During preheating, the LIGHT indicator flashes. This is not a malfunction. | — |
| The RE-350 cannot be controlled by a computer | • The power of the RE-350 or other equipment has not been turned ON.  
• Connection may be incorrect.  
• Incorrect operation may be the cause. | 12  
16  
— |

If the problem cannot be solved after checking the above points, contact your dealer.

---

**Memo**

The fluorescent illumination lamps and backlight are consumables. Replace with a new lamp if a lamp starts flickering or becomes dark. For details of replacement, consult your dealer.
