Information Revolution

Organizations are under pressure to improve information management due to rising volumes of data.

Failure to act now can negatively affect consequences …

Operations **Market** **Compliance** **Security**

Many organizations are also dealing with various wastes.
These can contribute to information management and governance problems:

64%
- Multiple information systems
- Waiting for information
- Multiple information formats, sources, and repositories

63%
- Excessive information/over-documentation
- Recurring transfer of information

Lean methods, best practices, and new technologies can help improve information management and governance — but these are missing in many organizations …

Only 50% have a strategy defined, and policies and tactics that align with the strategy disseminated across the entire organization.

Only 38% conduct mapping of information workstreams.

Only 38% have automated classification tools to catalog, store, and protect information.

27% have copiers that are more than five years old.
22% have multifunction printers that are more than five years old.

Only 30% have automated information usage tracking.

22% have enterprise content management systems that are more than five years old.

How will YOUR organization improve its information management and governance?
