

Canon imageFORMULA DR-G1100

Outstanding Budget-Friendly A3 Mid-Volume Production Scanner

The Canon imageFORMULA DR-G1100 won BLI's "Outstanding Budget-Friendly A3 Mid-Volume Production Scanner" award for the Winter 2016 test season for its....

- Lower than average suggested retail price and total cost of ownership.
- Faster than average multi-page speeds.
- Broad range of acceptable paper weights.
- Flawless reliability.

"With a list price and an estimated total cost of ownership both about 32 percent lower than average, the 100-ppm (200 ipm) Canon imageFORMULA DR-G1100 is one of the most affordable production scanners on the market. And its very good overall performance adds significantly more value to the device since it means users don't have to choose value or function," said Lisa Reider, BLI's senior product editor for scanners. BLI is proud to honor the DR-G1100 with its first Budget-Friendly Pick award."

"If a scanner is cheap, but lacks performance, we don't really see that as a value-add for the customer," said BLI Manager of Lab Operations Joe Ellerman. "The scanner also has to offer a solid product that won't hinder workflow processing. The imageFORMULA DR-G1100 provides users with a competitive performance at an affordable price. Plus, its larger than average and user-adjustable ADF handles a wider range of paper weights, adding advanced functionality at no additional cost."

About **BLI Pick Awards**

Twice a year with its Pick awards, BLI gives special recognition in each category to those products that provided the most outstanding performances in BLI's exhaustive lab tests. Its Outstanding Achievement awards acknowledge products or capabilities that stand out for attributes such as innovation, usefulness, energy efficiency or value.

BLI's awards stand alone in that they are based on a rigorous battery of lab tests that takes approximately two months to complete. The evaluation includes an extensive durability test, during a portion of which each unit is run at the manufacturer's maximum duty cycle. BLI's durability test is unique among office product evaluations and uniquely qualifies BLI to assess reliability, a critical factor for buyers and IT directors.

Other performance attributes evaluated include ease of use, media handling, productivity and value, among others. Each product that successfully passes BLI's lab test earns BLI's Recommended or Highly Recommended seal and a BLI Certificate of Reliability and the best performers qualify as Pick contenders. Consequently, a BLI Pick is a hard-earned award that buyers and IT directors can trust to better guide them in their acquisition decisions.
