

## Canon uniFLOW V5.4

**Outstanding Output Management Platform**

# Canon

The uniFLOW V5.4 product family has been honored with a prestigious Pick award as “Outstanding Output Management Platform” from the analysts at Buyers Lab (BLI) thanks to the platform’s many strengths, including its...

- Modular nature with a wide range of functionality including print management, job accounting, secure printing, mobile printing, fleet management, document capture and routing and more
- SmartClient architecture reduces print-related network traffic and number of print servers required in an organization
- Capability to manage print and scan workflows in a single integrated solution
- Deep integration with PRISMAdirect used in print rooms
- Excellent document security features and extensive integration with enterprise information and EHR systems

Organizations striving to get a handle on their document imaging activity will often wind up with multiple solutions to address cost accounting, print management, mobile printing, fleet management, document capture/routing and other needs. But such an implementation can be cumbersome, with multiple software packages running on various servers, each requiring different administration tools and ongoing management from IT personnel. The uniFLOW platform, developed by NT-ware Systemprogrammierung GmbH and sold exclusively through Canon and approved resellers, addresses all of these needs—and much more—in a comprehensive, modular offering.

uniFLOW delivers all the output management features one would expect of a world-class product, including job costing and accounting (with multilevel cost-center allocation for unlimited number of clients), support for locally connected printers, rules-based job re-routing, secure printing, convenient pull-printing, and advanced enterprise-level mobile print functionality. The uniFLOW Capture document scan-

ning/processing/routing capabilities include wizard-driven creation of scan workflows to scan to popular cloud destinations plus full-text OCR, zonal OCR and barcode recognition capabilities to enable feature-rich scan workflow opportunities. The uniFLOW Workflow Engine allows the tailoring of print and scan workflows to specific customer needs.

“The uniFLOW platform continues to evolve in directions we would have never anticipated,” said Jamie Bsales, Director, Office Workflow Solutions Analysis at BLI. “In addition to the online and small-business editions, the company has rolled out seamless support for production-level devices for customers’ in-plant printing department, the imageWARE Secure Audit Monitor Express module for maintaining the security of sensitive documents, and integration with leading EHR systems so healthcare users can employ the uniFLOW capture module to deliver data directly to those repositories. The possibilities for the platform seem nearly limitless, which means customers will continue to reap the value of their investment well into the future.”

## About **BLI Pick Awards**

---

With its annual document imaging solutions Pick awards, BLI gives special recognition to the software products that provided the most outstanding performances in BLI’s unique evaluations. Software products submitted for testing undergo an in-depth hands-on review that focuses on key attributes for a solution’s target market and compares how well the product stacks up against leading competitors. Pick winners rise above the competition in key areas such as feature set, ease of use, ease of administration, software integration, and value. Consequently, a BLI Pick is a hard-earned award that buyers and IT directors can trust to better guide them in their acquisition decisions.
