

Environmental Profile Sheet

The imageRUNNER ADVANCE 6575i III/6565i III/6555i III models incorporate Canon technologies, each with a strong environmental focus at every stage of the product life cycle—Produce, Use, and Recycle. These technologies, which focus on Energy Conservation, Resource Conservation, and Pollution Prevention, form the foundation of Canon’s Environmental Management System.

	Energy Conservation	Resource Conservation	Pollution Prevention
In order to help reduce dependence on petroleum-based materials, Canon uses 100% recycled plastics .*			
A variety of sleep recovery triggers, including motion sensing, help encourage the use of Sleep Mode , which minimizes power consumption.			
Power consumption in Sleep Mode is as low as 0.90 W!			
Power consumption is reduced by utilizing White LED array technology in its Color Image Reader versus using a traditional Xenon tube!			
Induction Heating (IH) technologies help reduce power consumption and limit the warm-up period .			
p0 Toner with a low melting point helps reduce fusing temperature requirements .			
All suppliers are required to meet Canon’s stringent Green Procurement policy and environmental terms. This helps Canon exceed the tough European Union’s RoHS Directive, which controls/restricts the use of certain hazardous substances .			
Each system is equipped with paper-, toner-, and energy-saving features that help to cut costs and conserve resources .			
Long-life parts and high-yield supplies help maximize uptime and help reduce the amount of materials consumed during the product life cycle.
