

Environmental Profile Sheet

The imageRUNNER ADVANCE C3330i/C3325i models incorporate Canon technologies, each with a strong environmental focus at every stage of the product life cycle—Produce, Use, and Recycle. These technologies, which focus on Energy Conservation, Resource Conservation, and Pollution Prevention, form the foundation of Canon’s Environmental Management System.

	Energy Conservation	Resource Conservation	Pollution Prevention
In order to help reduce dependence on petroleum-based materials, Canon uses 100% recycled plastics* and bio-based plastics on certain exterior parts.			
Power consumption in Sleep Mode is as low as 0.80 W!			
Power consumption during a one-week period has been reduced when compared to predecessor models, the imageRUNNER ADVANCE C2230 and C2225!			
Power consumption is reduced by utilizing White LED array technology in its Color Image Reader versus using a traditional Xenon tube!			
RAPID Fusing technologies help reduce power consumption and limit the warm-up period.			
pQ Toner with a lower melting point helps reduce fusing temperature requirements.			
All suppliers are required to meet Canon’s stringent Green Procurement policy and environmental terms. This helps Canon exceed the toughest global standards, such as those set by the European Union’s RoHS Directive, which controls/restricts the use of certain hazardous substances.			
Each system is equipped with paper-, toner-, and energy-saving features that help to cut costs and conserve resources.			
Long-life parts and high-yield supplies help maximize uptime and help reduce the amount of materials consumed during the product life cycle.
