

Environmental Profile Sheet

The imageRUNNER ADVANCE C5200 Series incorporates Canon technologies, each with a strong environmental focus at every stage of the product life cycle—Produce, Use, and Recycle. These technologies, which focus on Energy Conservation, Resource Conservation, and Pollution Prevention, form the foundation of Canon's Environmental Management System.

	Energy Conservation	Resource Conservation	Pollution Prevention
Canon's Life Cycle Assessment System (LCA) seeks to control carbon emissions at each life cycle stage. The result: An overall CO₂ target reduction of up to 20% over the previous generation model imageRUNNER C3480!			
In order to help reduce dependence on petroleum-based materials, Canon uses 100% recycled plastics* and bio-based plastics on certain exterior parts.			
Power consumption in Sleep Mode is as low as 0.8W!			
Savings in power consumption during a one-week period have been reduced by up to 55% when compared to the previous generation model imageRUNNER C3480!			
Power consumption is reduced by utilizing White LED array technology in its Color Image Reader versus using a traditional Xenon tube!			
Power consumption is reduced by utilizing Canon Image Sensor technology versus using traditional CCD sensors!			
Advanced Color RAPID Fusing technologies help reduce power consumption and limit the warm-up period .			
New pQ Toner with a lower melting point reduces fusing temperature requirements .			
All suppliers are required to meet Canon's stringent Green Procurement policy and environmental terms. This helps Canon exceed the toughest global standards, such as those set by the European Union's RoHS Directive, which controls/restricts the use of certain hazardous substances .			
Each system is equipped with paper-, toner-, and energy-saving features that help to cut costs and conserve resources .			
Long-life parts and higher-yielding supplies help maximize uptime and reduce the amount of materials consumed during the product life cycle.
