

## Agfa Apogee Integration

Canon and Agfa developed an integration between color imagePRESS devices and :Apogee, combining the power of digital and offset into one hybrid workflow to help increase productivity and efficiency.

One Workflow. Canon color imagePRESS digital presses integrate with Agfa :Apogee enabling you to drive both digital and offset presses from one “hybrid” workflow. This eliminates the duplication of prepress work, yields greater efficiency, faster turnaround times and easier job management across your presses.

Realize a Hybrid Workflow. With a hybrid workflow, you can output to a digital or offset press using the same file. This unifies your production environment allowing control over all jobs from one centralized hub. For example, you receive a job for 15,000 brochures total, but 500 are needed today. With a hybrid workflow you can print the 500 rush copies on your imagePRESS digital press and the remaining on your offset press. For a tighter integration, using a Raster PDF workflow, color management is handled in :Apogee Prepress.

Automate for Efficiency. Submit jobs to your imagePRESS digital press using Agfa :Apogee Prepress and Digital Print Link. JDF and JMF foster bi-directional communication enabling :Apogee and the digital press to “talk” to each other regarding output instructions and job status, decreasing manual intervention. The Device Capability File describing the configuration of your digital press is imported into :Apogee Prepress, allowing it to understand and utilize the specific features of the connected press. For further integration, media information from the imagePRESS Server Paper Catalog is communicated automatically and dynamically via Fiery JDF Connector to :Apogee Prepress, enabling you to select media from within the :Apogee interface and include in the JDF job ticket.

Get Started Now. :Apogee Prepress and the Digital Print Link are required. Contact your Apogee representative for details. The Device Capability File can be downloaded from the Canon corporate website [www.usa.canon.com](http://www.usa.canon.com). The Fiery® JDF Connector software is included in the media pack of the imagePRESS Server and must be installed on a separate PC or server to provide the necessary processing power and troubleshooting capabilities. Version requirements are based on the imagePRESS digital press in use. For more information on the latest requirements or purchasing imagePRESS devices, contact your Canon dealer.

## Workflow Integration

To help you be successful in growing your digital print business, imagePRESS Workflow Solutions focus on six critical areas, one of which is **Workflow Integration**.

Shortening job turnaround time is crucial to the success of your production environment. Our workflow integration solutions are designed to automate processes to increase efficiency, productivity, profitability, and streamline jobs through your shop quickly. We are also committed to having our solutions leverage the investment that you have made with your workflow, which will help shorten learning curves and serve your customers better.

Shift Pages to Digital. Integrate a color imagePRESS digital press into your familiar Agfa :Apogee workflow, getting up and running quickly.

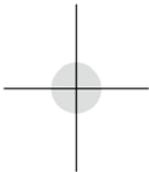

Increase Productivity. With a hybrid workflow the duplication of prepress work is eliminated, yielding greater productivity.

Centralize Control. With your hybrid workflow, easily send short-run jobs to your color imagePRESS digital press and high volume jobs to your offset press utilizing one centralized file.

Automate to Save. Process automation reduces the risk of costly errors saving both time and money.

*Agfa :Apogee Prepress with Digital Print Link streamlines the production environment allowing you to control jobs for both digital and offset from :Apogee Prepress client.*
