

EFI Fiery Central

EFI™ Fiery Central, a PDF-based workflow solution, helps medium to high-volume production environments increase job volume, decrease turnaround time and maximize productivity.

Shorten Turnaround Time on Complex Jobs. Production environments are continuously challenged with how to maximize efficiency, productivity and complete jobs in the shortest time possible. To help tackle these issues, Canon partnered with EFI to introduce EFI Fiery® Central. Fiery Central offers a solution for centralizing control over your production environment, automating workflows and increasing throughput with advanced make-ready, load balancing and engine optimization tools to maximize your investment.

Centralize Control Over Your Workflow. Fiery Central utilizes the familiar EFI Command WorkStation® (CWS) interface to provide a centralized view of multiple devices in your production environment. With CWS, you can log into and monitor several presses as well as manipulate and preview jobs from any connected device. Take advantage of the included Fiery features like Hot Folders, Compose, Impose and Scan.

Drive Productivity Utilizing Multiple Engines. The optional Balance™ module utilizes job splitting between dissimilar engines to maximize productivity and decrease turnaround time while reducing costs. Multiple color and black and white devices in the same workflow become a “printer group” and behave like a single “virtual” printer, accessible to all computers on the network. Jobs sent through the Fiery Central server to the printer group can be load balanced among the engines based on defined parameters and job settings. Load balancing includes fastest single engine, color split, copy split and long job split.

Automate Repetitive Tasks. The optional Flow module allows you to design customized prepress workflows with an intuitive, graphical user interface. The drag n’ drop tools reduce labor-intensive manual tasks as well as provide consistency and reliability by incorporating the file conversion, preflight, spot color management and approval, routing, and proofing processes into automated workflows. These workflows can be edited and managed by operators of any skill level and saved in re-usable templates to save you time, reduce errors and decrease rework.

Workflow Integration

To help you be successful in growing your digital print business, imagePRESS Workflow Solutions focus on six critical areas, one of which is **Workflow Integration**.

Shortening job turnaround time is crucial to the success of your production environment. Our workflow integration solutions are designed to automate processes to increase efficiency, productivity, profitability, and streamline jobs through your shop quickly. We are also committed to having our solutions leverage the investment that you have made with your workflow, which will help shorten learning curves and serve your customers better.

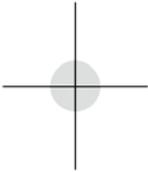

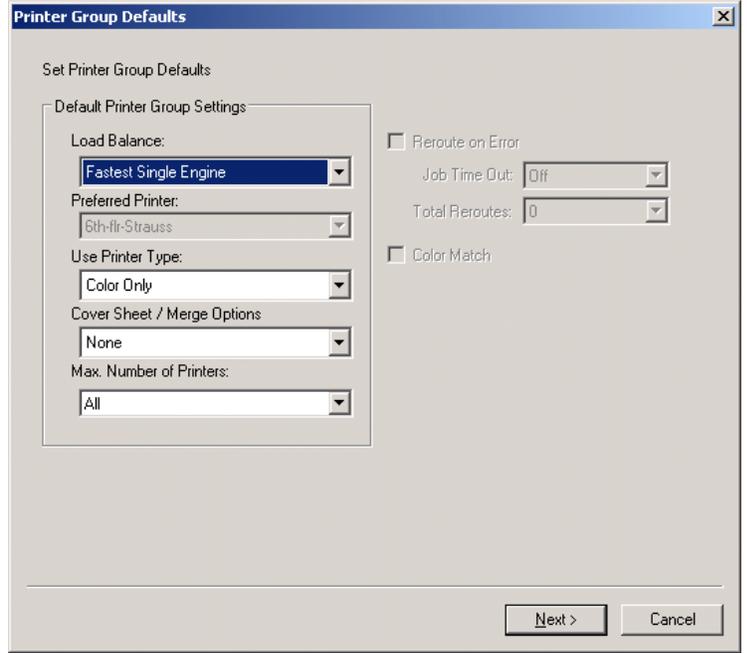

Maximize Productivity. Eliminate bottlenecks by centrally managing your workload. Fiery Central provides a centralized interface for setting up and sending jobs to multiple Canon print devices.

Turn Jobs Around Faster. Drive efficiency by combining multiple devices into a "printer group" and utilize the job splitting capabilities of Fiery Central.

Stop Wasting Time on Manual Tasks. Automate time-consuming, repetitive prepress tasks to produce more jobs in less time with fewer mistakes.

Integrate with Web-to-Print. EFI Fiery Central integrates with EFI Digital StoreFront® to further streamline your workflow from ordering and submission through prepress and production.
