WORKFLOW COMPOSER IMPLEMENTATION

Closely Integrate Your MFP with Your Database Solution

Many companies rely on dedicated production centers or complex workflows to scan data and documents into their backend or database systems.

Canon Information & Imaging Solutions can help integrate your imageRUNNER ADVANCE device with your existing systems. To do so, they leverage Workflow Composer MEAP connectors, device-embedded technologies that allow you to customize your MFP to support highly specific workflows. As a result, your employees can easily scan documents on your office MFP to many current databases and systems, including SAP, Oracle, and other industry-specific solutions.

Today, your device may be a bottleneck in your data and document workflows. Why not accelerate your processes with custom development?

Easily Add Index Information

In addition to storing documents and data, databases also require index information — metadata that they use to search, retrieve, and manage information. The Canon Information & Imaging Solutions team can help you set up a custom solution for integrating searchable documents from your device with your backend system.

Navigate Back End Systems from Your Device

Canon Information & Imaging Solutions can also create custom screens and input fields that allow you to index and store documents to your database right from your device interface. This enables you to improve accuracy and reduce the time it takes to enter, search, and retrieve documents and data.

Integrate with Leading Business Software Solutions

Moving documents from your device to your backend systems can be as easy as a touch of a button. Canon Information & Imaging Solutions can create solutions that can connect your device seamlessly with almost any leading database or document management system.

Supported solutions include:

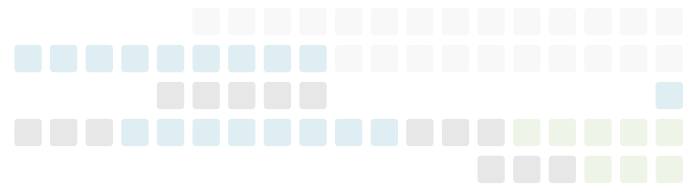

- Electronic Medical Records (EMR) systems
- Oracle database systems
- Legal case management systems
- SAP systems
- Financial and bank databases
- Human Resources management systems

Working with Canon Information & Imaging Solutions

Workflow Composer customization services begins with an assessment of your processes and the definition of the solution required. Canon Information & Imaging Solutions will then build and deploy it using the embedded software platforms on your device, and then provide onsite training for both administrators and end users. The process is designed to ensure a smooth rollout and get you up and running quickly.

Learn More

Close integration between devices and databases can streamline operations and move your business forward. Contact your Canon sales professional or authorized dealer to find out more today.

Get What You Expect

Every business has unique workflows and technologies. Canon Information & Imaging Solutions can help you streamline those systems, ensuring that you keep costs low and your staff more productive.

Before meeting with our team, you should be ready to discuss how you are currently using your systems. Identify any pain points you find and any opportunities you see.

That way, you'll help the Canon Information & Imaging Solutions team uncover new ways to keep you in front of the competition.
