

HP WEB JETADMIN

OVERVIEW

HP Web Jetadmin is a Web-based peripheral management software that is used for remotely installing, configuring, and managing a wide variety of network peripherals, in addition to the HP brand. Easy to use and available at no charge, HP Web Jetadmin is a popular tool used by many different organizations and industries.

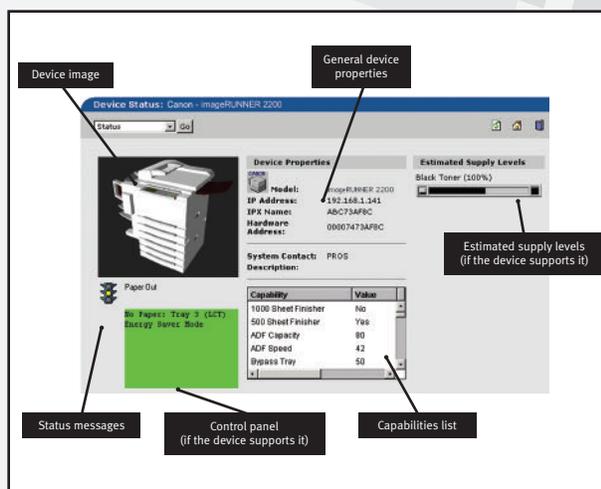

Cognizant of the fact that customers using Web Jetadmin will often times use devices other than the HP brand, HP has created a certification program that results in the development of a software plug-in enabling other-brand devices to be managed using the Web Jetadmin software.

Canon's dedication to provide integrated solutions that support our customers' varying network and peripheral management utilities is the result of our participation in HP's Certification program. Canon understands that HP Web Jetadmin customers expect to have centralized control using a single management tool for the devices on their network, and that it would be inefficient to use two separate software packages for that purpose.

BENEFITS:

- Provides seamless integration into HP Web Jetadmin
- HP Certification mark ensures end customers that HP has tested and approved this solution
- Enables centralized control of all devices, whether or not they are Canon devices, on an organization's network
- Provides real-time device monitoring and control for Canon imageRUNNER devices, ensuring maximum productivity and up-time for the device

FEATURES:

Device Status – Provides a comprehensive snapshot of the configuration and status of the Canon devices on the network. The elements included are as follows:

- Device image that reflects the current status of the device (i.e., if an error notice occurs, a red door will appear)
- Status Message that updates and explains the printer's condition
- Control Panel that reflects what is being displayed on the actual Canon imageRUNNER device
- Device Properties that refer to the identification of the printer
- Capabilities List that indicates the features and functionality of the printer
- Estimated Supply Levels that report the printer consumables levels

Device Configuration – Categories that include Quick Set Device Configuration, Network, and Security categories for setting general printer options, and printer network security settings.

Device Diagnostics – Displays concise information about the printer, such as device name, ID string, system contact, firmware version, and serial number as well as TCP/IP address, gateway, network mask, and NetWare information.

Device Alerts – Occurs when an error warning condition arises from within the printer. Web Jetadmin can be configured to send an e-mail to notify a person of the device's condition. Alerts can be set on the following categories:

- Supplies alerts – paper out, toner out, toner low
- Advisory alerts – configure paper, out of memory, manual feed needed
- Media path alerts – output bin full, paper jam, cover open
- Service path alerts – off-line, printer error intervention needed

SUPPORTED imageRUNNER DEVICES

- Color imageRUNNER® C3200 (includes imagePASS-C1)
- Color imageRUNNER® C3220 (includes imagePASS-C1)
- imageRUNNER® C3100 (includes imagePASS-E1)
- imageRUNNER® C6800 (includes imagePASS-D1)
- imageRUNNER 2200/2800/3300
- imageRUNNER 5000/6000
- imageRUNNER 3300i/5000i
- imageRUNNER 7200/85/8500/105 (includes imagePASS-M2)

Note: This list represents currently supported devices. Canon continues to add newly supported devices on an ongoing basis. Please refer to the Canon U.S.A. Web site at www.usa.canon.com for the most up-to-date list of supported devices.

Note: The Canon Plug-in for Web Jetadmin currently supports Web Jetadmin v7.8.

HOW TO OBTAIN THE PLUG-INS

The Canon Plug-ins for HP Web Jetadmin are available at no charge from the Canon U.S.A. Web site at www.usa.canon.com or www.imagerunner.com. They are located in the Downloads area/Third-party Software. Contact: alliances@cusa.canon.com

Solution Allies are those companies—typically enterprise software application providers—that have, in some way, recognized Canon products as functioning properly in collaboration with their own products or solutions. In many cases, these Solution Allies have included Canon products in their own certification programs, the nature of which can be found on the Solution Allies' respective Web sites. Canon presents these Solutions Allies to help customers identify software environments in which Canon products may function properly. However, Canon does not warrant or guarantee these third-party solutions and products or their compatibility with Canon products in any way. Canon urges potential customers to study the Solution Allies' own statements with respect to compatibility.
