

Desktop v3

Software Solution

efficient printing

professional output

device collaboration

Simply advanced.

Streamlined workflows. All from your desktop PC.

Desktop

for the imageRUNNER® and imageRUNNER ADVANCE Series

imageRUNNER ADVANCE Desktop is a powerful software program designed to effectively process office documents by providing services for users such as importing, editing, managing, searching, printing, and faxing documents.

Quick Printing Tool

- Print
- Fax
- Convert to PDF
- Print Preview

Desktop Browser

- Document Management
- Device Collaboration (with devices and external applications)

Three Editors

- Document Binder
- Object Layout Editor (a sub-module of Document Binder)
- Annotation Editor

Easy access

This user-friendly application reduces waste in office operations by facilitating smoother processes with your Canon imageRUNNER and imageRUNNER ADVANCE systems.

Quick Printing Tool

The Quick Printing Tool sits on the user's PC desktop and displays an icon which, when moused over, converts to a "quick menu." It offers four shortcuts to frequently used functions: "Print," "Fax," "Convert to PDF," and "Print Preview," which accesses the Office Make-Ready/Binder area. Users can drag-and-drop documents on one of these buttons to get instant access to that function.

Quick Printing Tool

Task Tray

This allows you to monitor the status of each system by providing icons that display printing status as well as fax transmission and reception logs.

You can also open Desktop Browser and view documents from the Task Tray icon. Items that are displayed here and managed using the icons include:

- Default printer status
- Print and fax job status and notification of process completion
- Fax reception alerts for received items
- Document notification of new and updated files in the libraries

Task Tray

Desktop Browser

Desktop Browser is a main interface for Desktop, which provides two main functions.

Document Management

The Document Management function utilizes libraries to manage documents, whether they're on your desktop computer or in a network folder, Document Server library, or an Advanced Box on an imageRUNNER ADVANCE system. It also proactively monitors your registered libraries to notify you of new documents or when an existing one has been updated. You can quickly review PDF files, images, and Microsoft® Office documents using the preview function within Desktop Browser, saving you the time of having to open each file in its native application.

And rather than search all your libraries to find the desired file, you can save time by using the powerful document search function.

Device Collaboration

Using this with hardware devices and external applications, you can efficiently link Desktop Browser with imageRUNNER ADVANCE systems.

- Create "Send to My Desktop" button
- Fax/Address Book Collaboration
- Accessibility to Advanced Box

Desktop Browser

Three Editors

Document Binder

Using Document Binder, you can combine PDF files, images, Microsoft Office documents, and existing binder (iwb) files to compose a new document that you can then quickly print or send via fax. You can send the document in its entirety or as subset of pages directly from the Desktop application. You can also edit a document in units of blocks or objects by using Object Layout Editor. Documents can be saved in Adobe® compatible PDF format to any library, a network folder, or the local desktop.

Document Binder

The Document Binder makes it easy to manage all your document workflows, from creating new files to printing and faxing them. Using an intuitive WYSIWYG preview, it allows you to easily customize your layout. For example, you can:

- Insert cover sheets, inserted sheets, and user-defined tabs
- Add and update a table of content
- Customize headers and footers (Bates Stamping)
- Provide chapter settings
- Do subset stapling
- Add page numbers, annotations, or watermarks within a binder

Object Layout Editor

Object Layout Editor is a component of Document Binder to edit binder documents. There are two types of edit methods. The first is Block Mode, which allows you to edit documents in blocks, condense margins to minimize empty space, and adjust the layout to reduce the number of pages when printing and faxing. And the second, Object Edit Mode, allows you to edit objects and perform fine adjustments of the content.

Object Layout Editor

Annotation Editor

Text and shapes that are added to original pages are called annotations. Annotation Editor enables you to add text and shapes to a PDF or binder file format. Operations include:

- Text Edits (underline, strikeout, highlight, etc.)
- Customized digital stamps
- Signature stamps
- and more

imageWARE Document Server Option

imageWARE Document Server is a robust platform designed to share documents and facilitate collaboration on files produced within Desktop or other applications as well as on imageRUNNER ADVANCE systems. Files can be accessed via a standard Web browser or through Desktop and shared in either a top-level archive or a sub-tier of individual team sites for easy organization.

Key features of imageWARE Document Server

- Web-based access or imageRUNNER ADVANCE Desktop client
- Flexible roles-based security
- Automatic versioning, retention, and logging
- Powerful search by file attribute, multiple conditions, or full text

System Requirements

Hardware

Minimum: CPU: 1.3GHz or more
Memory: 1GB or more (Microsoft Windows® XP: 512MB or more; Windows 7 64-bit Edition: 2GB or more)
Available Hard Drive space: 1.5GB or more. Data storage area for libraries is also required.
Display: XGA or higher resolution

Recommended: CPU: 2GHz or more
Memory: 2GB or more
Available Hard Drive space: 2GB or more. Data storage area for libraries is also required.
Display: SXGA, WXGA or higher resolution

Operating System

Supported: Windows XP Professional SP3 (32-bit)
Windows Vista® Business/Ultimate/Enterprise SP2 (32-bit)
Windows 7 Home Premium/Professional/Ultimate/Enterprise (32-bit, 64-bit)

Recommended Software

- Windows Search 4.0 (for Windows XP)
- Windows Installer 4.5 (for Windows XP)
- Acrobat® 9 or later/Adobe Reader® (latest version)
