### Print Speed Measurement Conditions

- Print speeds listed below reflect measured values based on Canon's unique measurement conditions and are for reference only.
- Actual print speeds may vary depending on printing conditions (document complexity, print frequency, temperature, humidity, printer driver settings and version, application used, system requirements, interface, type of paper used, direct print settings, etc.). Print speeds listed below do not take into account data processing time on host computer and data transfer time.
- Print speeds are calculated by rounding off the actual measurement value to the nearest integer.

</tbody>
</table>

Print speeds on photo paper are measured based upon making a single print under the above measurement conditions, starting from the beginning of paper feed using the automatic sheet feeder to the end of paper ejection.

- Page Size: 4"x6" or 8"x10"
- Media Type: Canon Photo Paper Plus Glossy II
- Print Quality: Standard (Default)
- Borderless: ON or OFF
- Application: Adobe Photoshop CS4
- PC environment: Microsoft Windows 7 Home Premium, Intel® Core™ i7-870 (2.93/8/1MB+8MB), RAM: 4GB, Interface: USB 2.0 Hi-Speed
