imageWARE
Enterprise Management Console

Version 4

Developed to Save IT Departments Significant Amounts of Time

The Device Configuration Management (DCM) feature for imageWARE Enterprise Management Console lets you back up, restore, or batch-distribute detailed device settings with the push of a button, saving IT departments significant amounts of time.

Advantages of DCM:

- **Save time during deployment using batch configuration** with retrieval of device settings from a reference device, then distribute to multiple devices.

- **Secure favorite settings and data** with easy backup and restoring of device settings.

- **Create and edit device settings information**.

- **Register combinations of category "use cases"** for distributing device settings information or device information data. Registering frequently used combinations enables you to choose multiple categories simply by selecting a use case.

- **Efficiently distribute customized settings**, such as those for "Main Menu," across the fleet.

- **Globally change System Administrator password**.

BENEFITS

- Manage fleet efficiently and in less time.
- Reduce IT burden to manage device data.
- Less downtime during device replacement.
- Save time when changing settings on devices.
- Less installation time at pre-configuration center or the customer site.
- Reduce risk of losing data.

SYSTEM REQUIREMENTS

The Device Configuration Management feature with a task called "Device Setting Values" must be used with imageWARE Enterprise Management Console and conform to the same system requirements.

DEVICE SETTINGS CONFIGURATOR

The Device Settings Configurator (DSC) is a tool for PCs to provide a function to load, edit, and output Device Settings Information (DSI) output from Remote UI or DCM feature, etc.
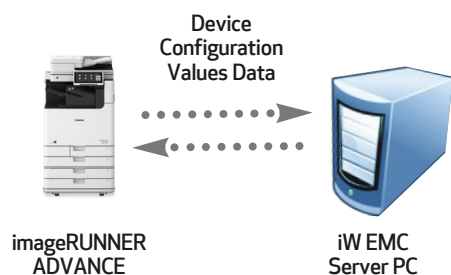

Tool Features

- Load (Open), edit, and output (Export) DSI.
- The file format of the corresponding DSI is [.dcm] only.
- When exporting to the device with the same serial number as that of the loaded DSI, all DSI not limited to edit target items is output.
- When exporting to the device where the serial number is different from that of the loaded DSI, only the selected edit target items of DSI are exported.
