

imageWARE Enterprise Management Console

ECOLOGY INFORMATION PLUG-IN

Control the carbon footprint of your imageRUNNER or imageRUNNER ADVANCE systems

The optional Ecology Information Plug-in for imageWARE Enterprise Management Console helps address the need for “green IT solutions” by providing an accurate measurement and analysis of carbon dioxide (CO₂) emissions based on power consumption and paper volume usage. The Ecology Information Plug-in provides a highly visual and intuitive 3-D graphical display. This allows for insight into these metrics as well as the capability to make changes in printing behavior and meet corporate targets based on estimations of CO₂ emission savings.

Advantages of this Plug-in:

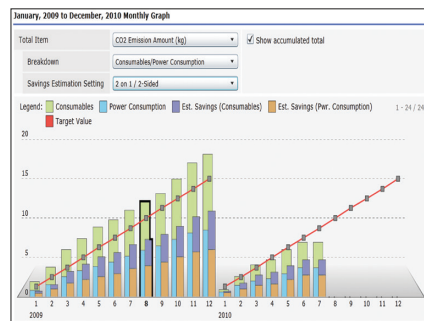

- Monitor CO₂ output by tracking power consumption and paper usage.*
- Capturing data analysis of past data allows estimated savings projections based on collected data and implements a behavior change, such as duplex, N-up.**
- Create graphical, intuitive display of data using Silverlight™. This can drill down to the user and device levels by year, month, date, and hour.**
- Utilize device views, which can be combined with the device map to add a location perspective.

* The energy consumption calculation is based on assumed conditions. The actual energy consumption will vary (be different from the calculation results) depending on the various conditions such as room temperature, the job pattern, product configuration (accessories) and machine settings (sleep mode etc.).

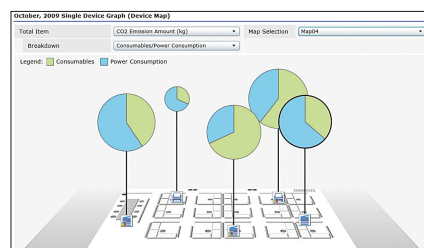

** Collaboration with AM Plug-in V.2.1 or later is necessary for User level tracking and Savings Estimation Simulation functionality.

SYSTEM REQUIREMENTS

The Ecology Information Plug-in must be used with imageWARE Enterprise Management Console and conform to the same system requirements.

Cumulative Graphical Display with CO₂ Targets and Savings Estimation Simulation

Device Map View of Absolute Value Display
