

imageWARE Enterprise Management Console

Manage Canon imageFORMULA document scanner fleet

The optional Scanner Management Plug-in enables you to centrally manage compatible Canon imageFORMULA DR-Series document scanners and ScanFront Series networked scanners in a fleet. You can even include your Canon MFPs or even third-party devices, all from a single central interface using the Canon imageWARE Enterprise Management Console.

SYSTEM REQUIREMENTS

The Scanner Management Plug-in must be used with imageWARE Enterprise Management Console and conform to the same system requirements. For the DR-Series, the Scanner Management Agent software needs to be installed on the workstation to which the scanner is connected.

Advantages of this Plug-in:

- **Manage your scanner fleet via network**
Discover Canon imageFORMULA scanners on your network to view scanner information such as product names, serial numbers, IP address, and firmware and software versions.
- **Remotely monitor scanner usage statistics**
Monitor the device health of all your scanners and maximize the investment by collecting usage statistics such as scan counts, roller counts, and jam counts as well as the state of your consumables. This helps to minimize downtime.
- **Push out updates simultaneously**
You can easily update firmware, drivers, and software, or distribute shared Job settings for Canon software, simultaneously on multiple document scanners using imageWARE Enterprise Management Console's task menu. This will help save your IT department significant time.
