Network Requirements

Before installing the wireless drivers and software on the computer, make sure that configuration of the computer and access point or router is complete, and that the computer is connected to the network.

Software Installation:

If the printer is already connected to the network, it can be used on additional computers on this same network. Just install the drivers, and software you wish to use, and you will be printing and scanning wirelessly. You don’t need to change any settings on the printer or connect a USB cable between the computer and printer.
Notes on Network Connection

• The configuration, router functions, setup procedures and security settings of the network device vary depending on your system environment. For details, refer to your device’s instruction manual or contact its manufacturer.

• In an office setup, consult your network administrator.

• If you connect to a network that is not protected with security measures, there is a risk of disclosing data such as your personal information to a third party.

• Place the machine and computers on the same network segment.
Installing the Driver

To use the machine by connecting it to a computer, software including the drivers need to be copied (installed) to the computer’s hard disk. We recommend using the Setup CD-ROM for installation.

**Step One**

Turn on the computer, then insert the Setup CD-ROM into the CD-ROM drive.

Double-click the Setup icon of the CD-ROM folder to proceed to the following screen.

If the CD-ROM folder does not open automatically, double-click the CD-ROM icon on the desktop.

**Step Two**

Ensure the printer is powered on.

On the opening Setup screen select **Next**.
Confirm your place of residence at the **Setup** windows to proceed.

**Step Three**

The setup will quickly search for the printer on the network. On the **Setup** window, select **USA, Canada, Latin America** radio button, then click **Next**.

**Step Four**

Select **United States** and then click **Next**.
Installing the Drivers and Software

When the printer and an additional computer are connected to the same network, the installation setup will go to **Software Installation List** window.

**Step Five**

Select the box beside the item you wish to install. By default, **MP Drivers** and **Canon IJ Network Tool** are selected. Then click **Next** to begin the installation.

**Note:**

If the below window appears and the printer is connected to the same network as the computer, click **Redetect**.

**Important:**

If the below window appears click **Allow**.
**Step Six**

At **Detected Printers List** window, select your printer model and then click **Next**.

The printer model will include the printer’s MAC address. The MAC address consists of alpha and numeric characters – depicted below as XX.XX.XX.XX.XX.XX.

**Step Seven**

At **Setup Completion** window, confirm your network’s SSID appears and then click **OK**.
Step Eight

At Add Printer Setup window, click Add Printer.

Step Nine

At the Add Printer window, select Canon MX450 series, which is in line with Canon IJ Network under Kind, and then click Add.
Adding the Printer

Step Ten

You will be returned to Add Printer Setup window, now click Next.

Continue

Click on the appropriate button to continue with installation.
Completing the Installation

**Step Eleven**

At **Setup Complete**, click **Next**.

**Step Twelve**

When installation is complete click **Exit**.
**Note:**

*IJ Network Scanner Selector EX* allows you to select the printer to be used for scanning over a network from your computer or the operation panel.

**Starting Canon IJ Network Scanner Selector EX**

Click *Canon IJ Network Scanner Selector EX* in the menu bar to display the menu.

If *IJ Network Scanner Selector EX* is not running, from the Go menu of Finder, select Applications, then double-click the Canon Utilities folder, *IJ Network Scanner Selector EX* folder, then *Canon IJ Network Scanner Selector EX* icon.

**Network Scanner**

Select *Canon MX450 series* radio button and then click OK.

Click *Scan-from-Operation-Panel-Settings* button and click the appropriate button to enable scanning from the operation panel.
