Getting Your Multifunction
Back On Your Network
After A Router Or Network Change

PIXMA MG2900 series

Windows OS

Information

Important

If any of the following situations exist

- You have replaced your Router or Access Point

- You want to use a different wireless network

- Router settings have been changed.

Please complete the following steps to apply the new configuration settings to your multifunction.

Preparing to Connect My Multifunction To My Network

Network Requirements

Before connecting the machine to the network, make sure that configuration of the computer and access point or router is complete, and that the computer is connected to the network.
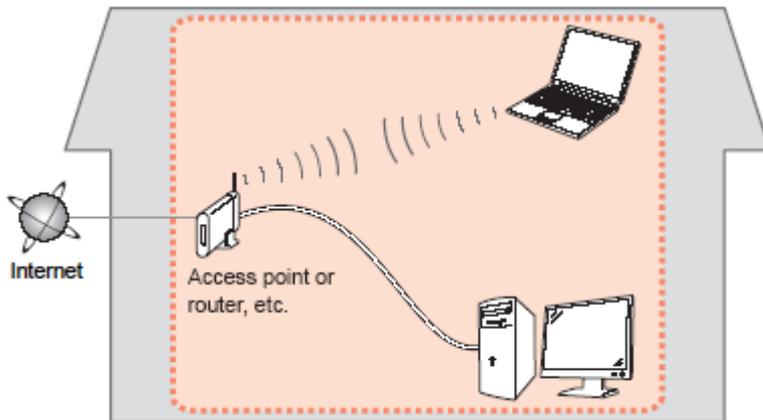

Wireless Connection

Before connecting the machine to the network, the computer needs to be connected to the network. Make sure that configuration of the computer and access point or router is complete.

Preparing to Connect My Multifunction To My Network
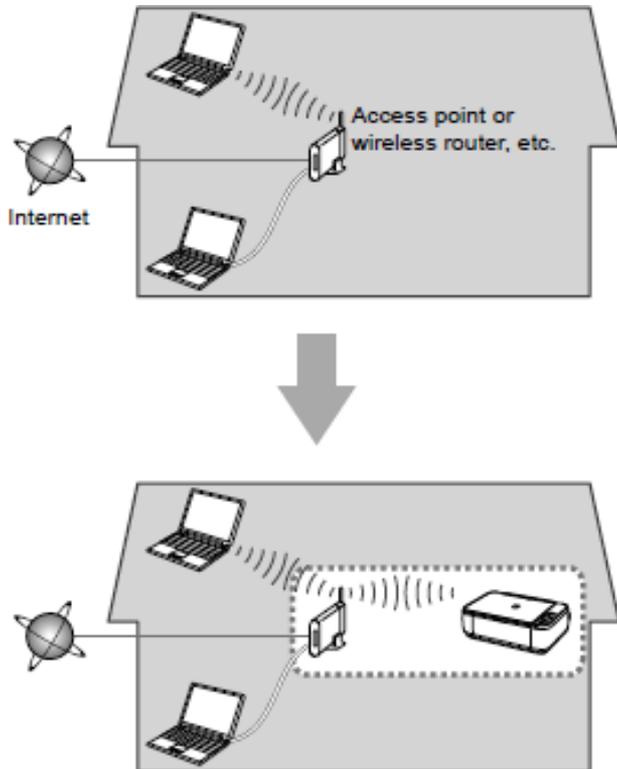

Notes on Network Connection

• The configuration, router functions, setup procedures and security settings of the network device vary depending on your system environment. For details, refer to your device's instruction manual or contact its manufacturer.

• In an office setup, consult your network administrator

• If you connect to a network that is not protected with security measures, there is a risk of disclosing data such as your personal information to a third party.

• Place the machine and computer on the same network segment.

Installing the Drivers & Software

Software Installation

To use the machine by connecting it to a computer, software including the drivers needs to be copied (installed) to the computer's hard disk. Installation time varies depending on the computer environment or the number of application software to be installed.

IMPORTANT

• Log on as the administrator (or a member of the Administrators group).

• Quit all running applications before installation.

• Do not switch users during the installation process.

• Internet connection may be required during the installation. Connection fees may apply. Consult the internet service provider.

• If the firewall function of your security software is turned on, a warning message may appear that Canon software is attempting to access the network. If such a warning message appears, set the security software to always allow access.

Installing the Drivers & Software

When you reinstall your printer on your network because of a router or network change, you follow the same procedure as for a first time install. A step-by-step walk through of the wireless setup is built into the installation routine of the software for your PIXMA.

To begin the reinstall of your PIXMA MG2900 series to your wireless network, you must first download the software to your computer. *Insert the Setup CD-ROM into your computer. The setup program will start automatically.

*If you don't have or cannot use the Setup CD-ROM, follow the steps below to start the setup.

• Download the software (click the link to download)

• Double-click the downloaded .exe file.

After the file, Win-MG2900-1_0-ucd.exe, has downloaded successfully, double-click it to start the install procedure.

Installing the Drivers & Software

If the following screen appears, click **Start Setup Again.**
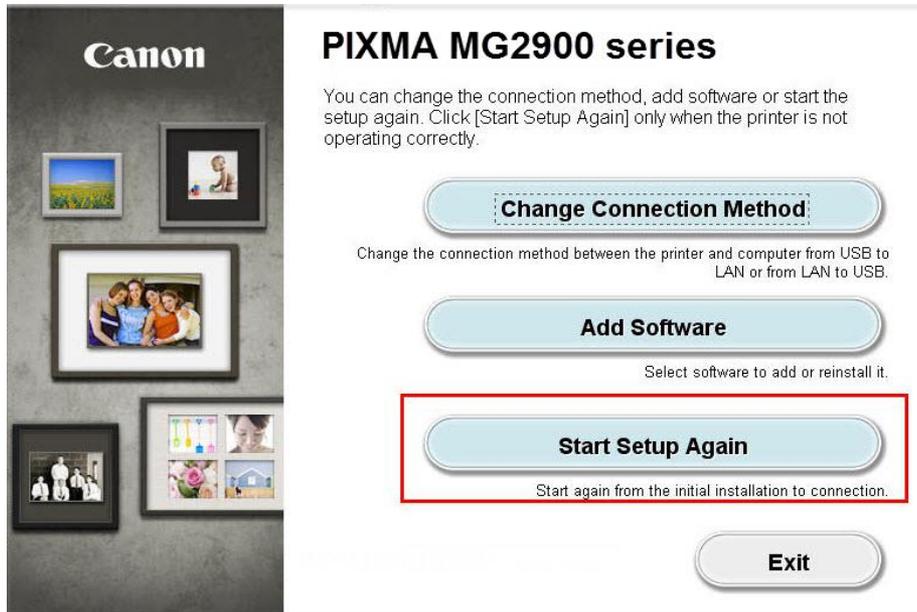

The setup instructions presented in this document describe the "**Cableless Setup**" method which does not require the need to know the SSID (network name), or network passphrase and does not require the printer to be temporarily connected to the computer with a USB cable.

The **Cableless Setup** is not supported in Windows XP.   For Windows XP Users: Use the " **Wireless Setup Using the USB Cable**" method , whereby a USB cable is temporarily connected between the printer and computer during setup.

If the **User Account Control** dialog box appears during the setup, click **Yes** or **Continue**.

Installing the Drivers & Software

Click **Next** on the initial screen.
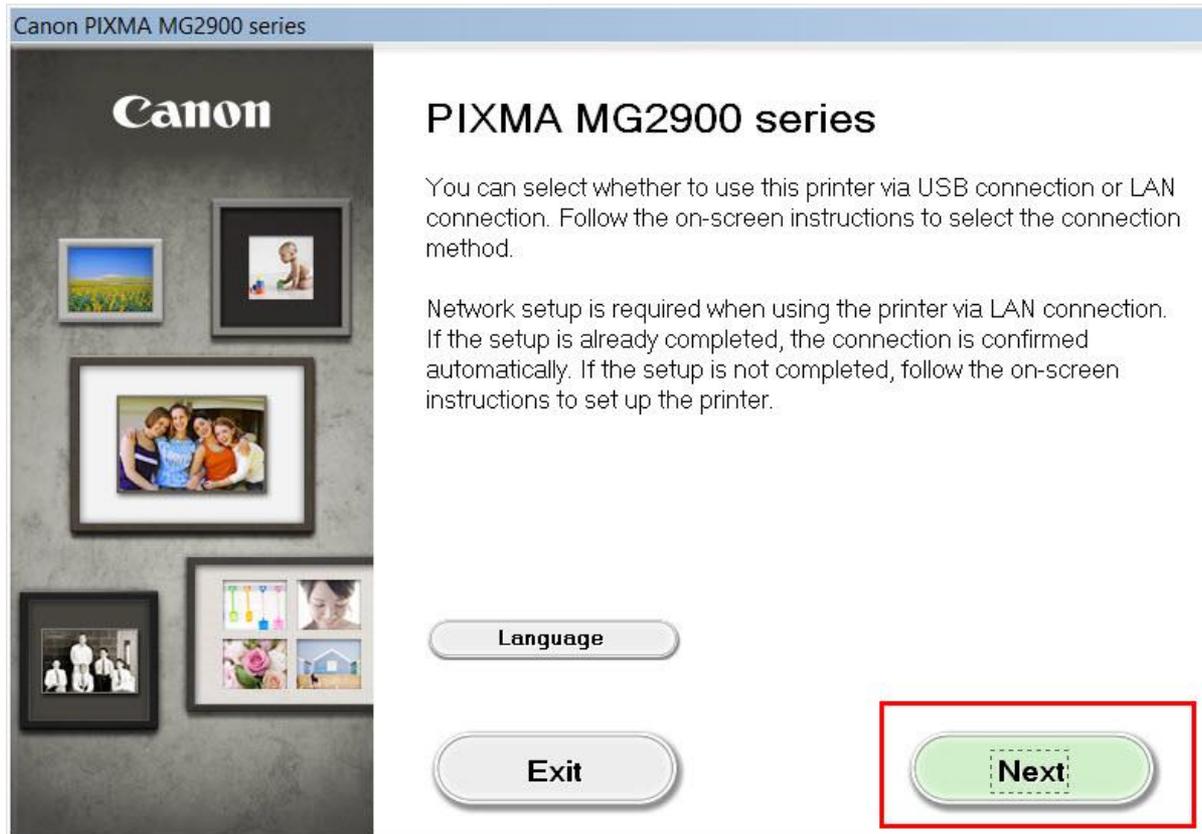

Installing the Drivers & Software

On the following screen, select **Wireless LAN Connection,** then click **Next**.

Canon PIXMA MG2900 series

Select the printer connection method.

Installing the Drivers & Software

On the following screen, select **Access Point Connection,** then click **Next**.

Installing the Drivers & Software

Continue following on-screen instructions. On the **Printers on Network List** screen, check the **Setting printer could not be found on the list** checkbox and click **Next**.
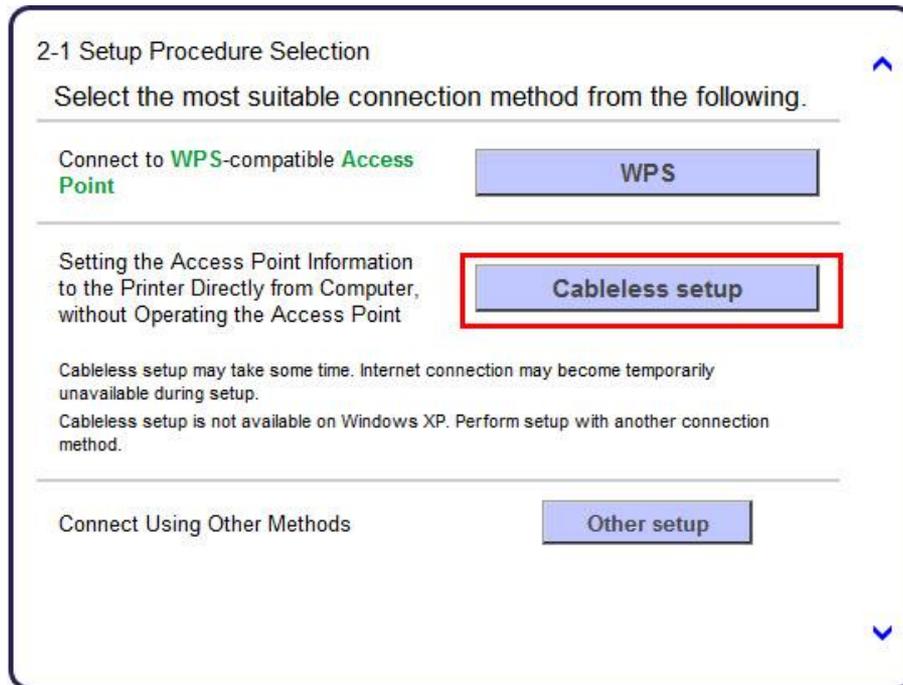

Installing the Drivers & Software

Continue to follow on-screen instructions.

Select **Cableless setup** on the **Setup Procedure Selection** screen (2-1).

If the Install .NET Framework screen appears, Click Yes

Installing the Drivers & Software

Carefully follow the instructions on the **Connection via Cableless setup** screen. (3-1). Click **Next**
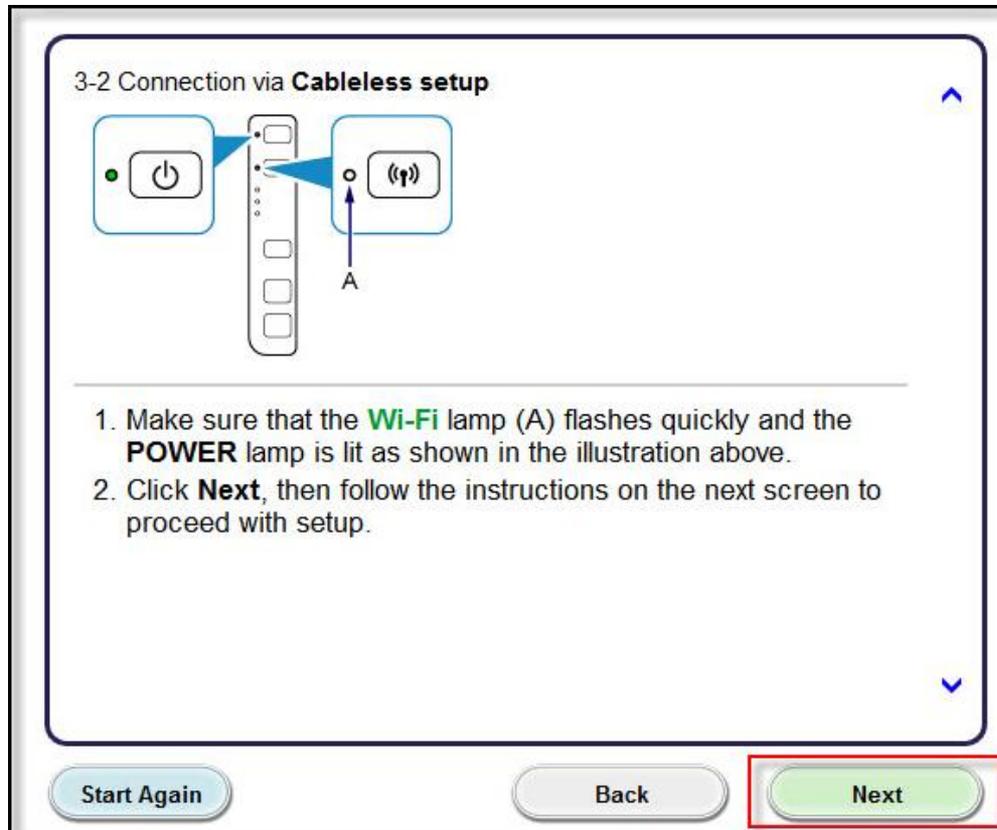

Installing the Drivers & Software

Carefully follow the instructions on the **Connection via Cableless setup** screen. (3-2). Click **Next**

Installing the Drivers & Software

Click **Next** on the **Connection completed** screen.

Installing the Drivers & Software

Continue following on-screen instructions. On the **Software Installation List**, select *software to install and click **Next**.

***MP Drivers** is required and cannot be deselected. We recommend installing **My Image Garden** and **Quick Menu** to take full advantage of the printer's features.

Note: It is not necessary to reinstall **My Image Garden** or **Quick Menu** if they were installed previously.

Installing the Drivers & Software

Continue following on-screen instructions.

When the **Setup Completion** dialog box appears, click **Complete**.
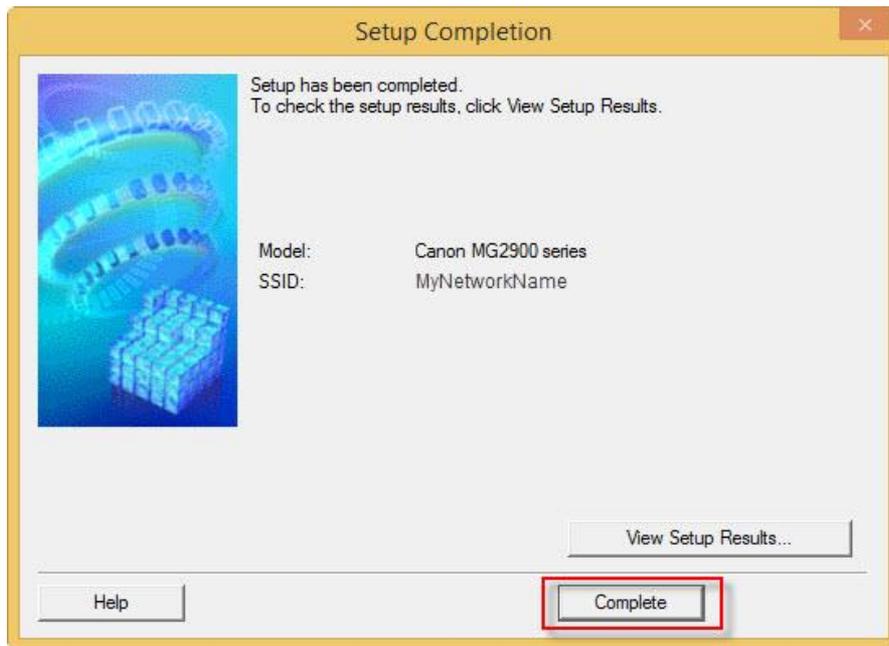

At this point, setup of the printer and network is complete. Continue to follow any remaining on-screen instructions to finish and exit the setup program.
