EF-M 18-55mm f/3.5-5.6 IS STM

Compact and lightweight design, Optical Image Stabilizer, Built-in stepping motor (STM), Dynamic IS, 7-Blade circular aperture

**IMAGE STABILIZER TECHNOLOGY** uses a lens shift type system to compensate for camera shakes and reduce blurs.

**OPTICAL IMAGE STABILIZER TECHNOLOGY** uses miniature sensors and a high speed microcomputer built into the lens which prevent image blur and creates a sharper image.

**STEPPING MOTOR (STM)** Canon EF, EF-S and EF-M lenses now offer a stepping motor (STM) drive, designed to deliver smooth and quiet continuous AF during video shooting when paired with the Movie Servo AF feature on select EOS cameras.

**ULTRASONIC MOTOR (USM)** to power the lens autofocus mechanism instead of large noisy drive trains powered by conventional motors, Canon USM lenses employ the minute electronic vibrations created by piezoelectric ceramic elements. The focusing action of the lens is fast and quiet, with virtually instantaneous stops and starts.
