ACCESS MANAGEMENT SYSTEM PLUG-IN

Maintain high security and prevent abusive use behaviors

COMPLETE CONTROL

Now that you've purchased a new Canon Color imageRUNNER or imageRUNNER ADVANCE system, controlling its user access is the first step toward maintaining high security and preventing potentially abusive color usage.

The Canon Access Management System Plug-in allows you to configure users' access rights on a feature-by-feature basis on your imageRUNNER or imageRUNNER ADVANCE system.

By using the Access Management System Plug-in, color printing is only available to those who require it. To further enhance document security on your imageRUNNER or imageRUNNER ADVANCE system, the Access Management System Plug-in can also restrict many frequently used features, such as access to web browsing, e-mail, and faxing. This is just one of the many unique features available.

BUILT-IN ROLES

The Access Management System Plug-in provides predefined roles for every business user: Administrator, Power User, Limited User, and Guest. Additional custom roles can be defined to work in conjunction with the predefined roles to fine-tune access control.

ENTERPRISE SCALABLE
Advantages of this Plug-in:

- Track document output costs.
- Offer charge-back capability with an accurate collection of billing data—on a per-project basis—for all your copies, prints, faxes, and scans.
- Enforce document-level print restriction, discouraging the use of higher-cost machines and increasing overall security.
- Quickly generate ROI reports.
- Provide simple and efficient billing code management.
- Chart the optimal deployment of Canon equipment.

| COPY	MAIL BOX
• Color copying • Two-sided copies • Page layout	• Print/color print • Two-sided printing • Page layout
SEND	**MEAP APPLICATIONS**
• Destination type • Specific address domains • Address book access • Device signature PDF	Features for applications can be restricted separately
WEB ACCESS	**PRINT JOB**

ACCESS MANAGEMENT SYSTEM PLUG-IN

ROI WITH CANON'S ACCESS MANAGEMENT SYSTEM

The ability to control enterprise-wide access to print, fax, and web features on your MFPs is a significant step toward controlling expenditures and maintaining security. The Access Management System Plug-in is a simple solution that can be implemented today to provide effective cost control and heightened confidentiality.

SYSTEM REQUIREMENTS

The Access Management System Plug-in must be used with imageWARE Enterprise Management Console and conforms to the same system requirements.

---

imageRUNNER or imageRUNNER ADVANCE System without Access Management System (Unprotected)

- No features are restricted.
- All employees can utilize all features of the device.

User A — Though he doesn't need color printing/copying, user has no restriction.

User C — User never prints two-sided documents.

User B — User can send unrestricted e-mails and faxes.

User D — A company contractor can use the custom MEAP application developed for employee use only.

imageRUNNER or imageRUNNER ADVANCE System with Access Management System (Protected)

- Based on requirement, IT administrators create roles for all users on the imageRUNNER or imageRUNNER ADVANCE system.
- All users must log-on to the imageRUNNER or imageRUNNER ADVANCE system and, based on their role, certain features will be disabled.

User A — With the Access Management System, user can only print in black and white.

User C — By default, all printing will be two-sided.

User B — For this user, e-mail and fax functions are restricted.

User D — User now must utilize the Guest account; access to the MEAP application is prohibited.
